1. Claims 1-3,5,6,8,10,11 remain for examination. Claims 4,7,9 have been canceled.
2. Upon further review and based on recent guideline form Tech Center. The following action includes "101" rejection . Since the guideline was not available during the past examination, the finality on 12/28/04 has been withdrawn. This is a non-final action to allow applicant a chance to respond.

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

3. Claims 10, 11 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The reasons are given below :
4. As to claims 10,11, Claim [10] is not limited to tangible embodiments. In view of Applicant's disclosure, specification page [ 13], paragraph [ 0054], the medium is not limited to tangible embodiments, instead being defined as including both tangible embodiments (e.g., [ CD-ROM ]) and intangible embodiments (e.g., [carrier wave] (see also the internet , intranet, and transmission medium). As such, the claim is not limited to statutory subject matter and is therefore non-statutory. Based on the above cited specification, the computer readable medium does not necessarily include hardware, and it can also be implemented in , for example, a carrier wave, which is not tangible.

5. Claims 10,11 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential elements, such omission amounting to a gap between the elements. See MPEP § 2172.01. The omitted elements are: the elements of the microprocessor that make microprocessor core to be embodied in software .

6. Claims 1-3,5,6,8 are allowable over the art of record for reciting the combined functional details for each :

a) the plurality of mappers, the first mapper , the second mapper, the multiplexor and the decoding and execution by the processor (claim 1),

b) the reading of instructions, the mapping of each instruction, the selection of the PIWF configuration for decoding and execution by the processor (claim 5);

c) the execution unit, the cache , the cache controller, the plurality of mappers, the multiplexor, and the means for the comparison (claim 8).
